PUCK-2

ANTENNAS | PUCK-2 SERIES
2-IN-1 TRANSPORTATION & IOT/M2M ANTENNA
698 - 3800 MHz; 2X2 LTE (MIMO), 6dBi

Product Overview

Poynting’s new PUCK range offers a small profile antenna for use in the IoT/M2M, Smart Meter, Smart Utilities, Transportation, Marine and the Agricultural/Farming markets. The PUCK-2 consists of a 2-in-1 antenna system within a single housing, featuring 2x2 MIMO LTE antennas (for 2G/3G/4G) that cover the 698 to 3800 MHz band which includes the most popular international LTE bands. The PUCK exceeds the performance of many competitors due to the attention to design of this high-performance antenna. The radiation patterns of all radiating elements provide an excellent balance between omnidirectionality, pattern diversity and good radiation abilities at the desired elevation which is often overlooked in such a small size antenna. Despite its small size, this antenna provides excellent performance especially at the higher frequency bands where performance is critical for LTE throughput and connection stability. This antenna is designed so that both the LTE ports are connected to the router/device to ensure the best performance. Please see other derivatives of the PUCK range that are more suitable for a SISO application.

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The PUCK-2 delivers superior performance across all bands with a VSWR of ≤2.5:1 over 85% of the band.

*Measured with 2m low loss cable
*Measured with 50Ω load terminated to unused port

Gain in dBi

6 dBi is the peak gain across all bands from 698-960, 1710-2700 & 3400-3800 MHz

Peak Gain @ different bands:
-1 dBi @ 698-960MHz
6 dBi @ 1710-2700MHz
6 dBi @ 3400-3800MHz
